

## Sanderband<sup>®</sup>

...the Alternative to Steel Strap

...for securing loads and cargo

**Sanderband®**  
polyester strap  
"as strong as  
steel" for many  
applications:

Made of high tenacity polyester yarns (the same material as lifting slings and safety belts).

**Strong and light weight:**

Sanderband® polyester strap has a tensile strength of up to 2000 daN (steel strap with the same tensile strength would be six times as heavy). Sanderband® is very flexible and safer to handle than steel strap.

**Secure tightening:**

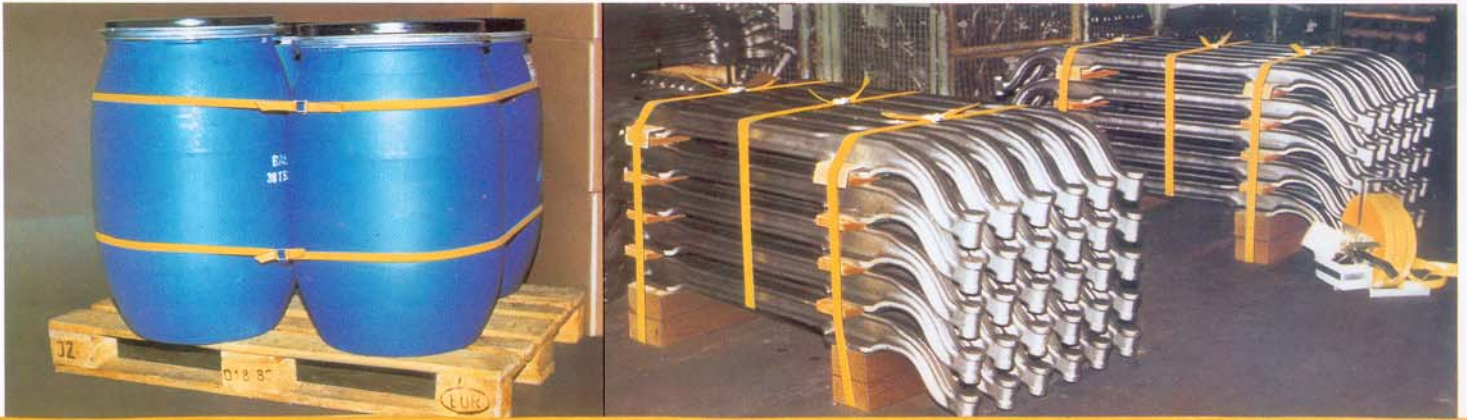

inexpensive steel tensioning "buckles" are easy to use to secure cord strap and to tension, or re-tension, straps by hand or with a light duty strap tensioning tool.

**One-way security:**

economical Sanderband® allows you to secure loads for one way shipment without the cost and logistical problems associated with reusable belts.

**Flexible:**

Sanderband® conforms to all product shapes (round, angular or irregular) to hold loads securely to their final destination.

### Versatile:

Sanderband® polyester strap is available in different widths and break strengths (from 3 – 20 kN (300 – 2000 kp) to meet the requirements of various applications and give you the best cost-performance relationship.

### Special types: antistatic version

is available for use in mining or other industries where there is a special risk of explosion. Also available in custom colors.

### Safety:

Sanderband® polyester strap unlike sharp edged steel strap or wire, poses no risk of cutting or puncture wounds to operators, either during strapping of the package or removal and disposal of the strap at destination. Cord strapping also minimizes damage to goods.

As a manufacturer with broad experience in strapping, fastening and securing loads and packages for transport and shipment, Sander can provide its customers with cost effective solutions to the most demanding applications.

Rely on Sander as your partner to furnish sound packaging recommendations and the right solutions for your most demanding packaging and transport security problems. Call Sander today!

## Sanderband® Accessories

...mobile, always ready to use

Sanderband® accessories are made of strong materials, with the dimensions and durability required to work reliably with your strapping as a system.

### Buckles

- easy to use
- close securely
- retensionable

### Strap Dispensers

- light and portable with strap coil mounted
- stable
- powder painted for corrosion resistance

### Tensioners

- light weight and easy to use
- can be used horizontally or vertically
- for strap widths up to 40 mm
- high tension capability

### Advantages of Sanderband® Systems

- alternative to steel strap, wire ties or belting
- as strong as steel: tensile strength up to 20 kN (2 tons)
- absorbs shock loads
- cost-effective throw-away strap
- facilitates retensioning
- easy handling
- minimizes cutting and abrasion damage
- won't rust
- reduces cuts and injuries
- weather resistant
- **strong and lightweight**

...improved productivity through safe handling and ease of use
